BEKINA polyurethane boots

Advantages PU

- **Light as a feather**
Much lighter than rubber or PVC.

- **Thermo-insulating: cool in summer, warm in winter**
High thermo-insulation because of the foamed material consisting of millions of tiny air bubbles. Remains flexible, even at extreme temperatures of -20°C.

- **Durable**
Tests prove that polyurethane boots will last up to three times longer than PVC or rubber boots (when used in similar circumstances).
Bekina boots are resistant to oil, fats and manure.

- **More slip resistance**
Steplite X is SRC approved. The improved and unparalleled features make our boots experts in all areas - every single day.

What is polyurethane?

Polyurethane is a synthetic, foamed material consisting of two components: polyol and isocyanate. Both are mixed together to result in an air bubble structure. The combination of the 2 materials lies at the origin of PU's dual nature being flexible as well as strong and durable.

SIZE RANGE 3-14
