SPECIFICATION SHEET

GUEDAL AIRWAYS SET OF 8

Guedel Airways are used to prevent the tongue from obstructing the airway during resuscitation.

The Guedel Airways are suitable for use on unconscious patients. With conscious or semi-conscious patients there is a high possibility that the device would stimulate a patient's gag reflex. This could cause the patient to vomit and potentially lead to an obstructed airway.

Guedel Airways have a bite block in their design to prevent biting of tongue and airway occlusion.

Guedel Airways come in different sizes and are colour coded for easy identification of sizes.
