

# Wastemaster®

## The master of all waste handling gloves

**Wastemaster® from Polyco was designed in collaboration with the waste and recycling industry and is intended to be used as under glove protection against sharps injuries.**

The Wastemaster® utilises high performance HexArmor® SuperFabric® technology engineered to provide the highest level of needlestick protection available. Tested using 25 gauge hypodermic needles, it gives users incredible protection against needlestick injuries. The two layers of glove plates arrest, trap and block needles, preventing them from reaching the skin surface. The glove also attains the highest level of cut resistance, European standard EN388 Cut Level 5. Offering full coverage over the entire hand for ultimate protection, the Wastemaster® is the safe choice when sharps injuries threaten.

**Case Quantity**  
1 pair per polybag

### Typically Used For

- Waste Recycling and Sorting
- Hospital Waste Handling
- Laundry & Linen Handling
- Wastewater/Sewage Treatment
- Local Authority Work
